03 · Overview

Point. Scan. Done.

Logline

A document scanner that stays on your phone. Scan, crop, sign and save PDFs with no account, no ads and no internet permission.

Synopsis

Nexus Scanner © turns an Android phone into a private document scanner. Point the camera at a page and it finds the edges, flattens the shot and cleans up the scan. From there you can sign it, recognize its text, file it in a folder and export it as an A4 PDF.

Everything happens on the device. The app does not request Android's internet permission, so it cannot upload your scans. Scanning, text recognition, folders and PDF export all work offline.

From the Nexus Scanner © promotional film. Footage is for illustration only.

Built to stay private

- **No account.** Nothing to sign up for.
- **No ads, no analytics,** no crash-reporting service.
- **Camera is the only permission.** Photos come in through the Android photo picker.
- **$16.99 once.** No subscription and no upsells.

01 · AUTO-CROP
Finds the page edges and cleans up the scan for you.

02 · OCR
Searchable, copyable text from built-in, offline recognition.

03 · SIGNATURES
Sign documents on your phone and save them as PDFs.

© 2026 Johnny Haynes. All rights reserved. · Nexus Scanner ©

04 · Features I

Scan, batch, ID cards.

SCAN

Live edge detection

- Outlines the page on the camera preview as you move.
- Optional auto-capture fires once the page is held steady ("Hold still..."); switch it off with the camera's Auto toggle. The shutter button always works.
- Drag the four corner handles to fine-tune the crop, with a magnifier for precision, or use Auto re-detect or Full image.
- Perspective correction flattens pages shot at an angle.
- Flashlight toggle for dim rooms, or import photos with the Android photo picker.

Live edge detection finds the page for you.
(Illustration)

BATCH

Many pages in a row

Tap **Batch Scan** and keep capturing; a page counter and thumbnail strip track your progress. Then review them all at once: drag to reorder, delete, retake, rotate, adjust corners, or change the filter on one page or all of them. Save the document, or **Save & export PDF**. An unfinished batch can be resumed if the app closes.

ID CARD MODE

Both sides, one page

Menu → **ID card**: capture the front, then the back. Both sides are flattened, kept in color (Magic Color) and placed on a single white A4 page, saved as a new document.

QR + BARCODE

Built-in code reader

Menu → **Scan QR code** reads QR codes and barcodes; copy, share, or open a link in your own browser.

IMPORT

From your photos

Pick one photo to crop it, or several to review them as a batch, with no storage permission needed.

© 2026 Johnny Haynes. All rights reserved. · Nexus Scanner ©

05 · Features II

Clean up, sign, export.

FILTERS

Six filters, each with a live preview

Magic Color | Original | Enhanced | Grayscale | B&W | Enhanced B&W

Enhanced B&W is the default: a photocopier look with dark text, soft gray mid-tones and clean white paper. ID card mode uses Magic Color so ID photos keep their color. A saved page can get another filter later from its page menu.

SIGNATURE

Drawn once, reused

Menu → **My signature**. Place it on any page: drag to move, pinch to resize. Scan a contract, sign it and send it without printing anything.

PDF

A4 export and viewer

A4 PDF export with an optional diagonal watermark you type yourself. Built-in PDF viewer, plus **Share** and **Open with...**. Export several documents as one combined PDF. File names come from the document title.

OCR · SEARCH

Find text inside scans

Offline text recognition for Latin-script languages. Copy, share or save a page as .txt. Search your library by document name and by the words found inside the pages.

ORGANIZE · PAGES

Folders and editing

Create, rename and delete folders, sort by date or name, move documents, multi-select to merge. Drag pages to reorder, rotate or delete single pages, and add pages to an existing document.

BACKUP

Offline backup and restore

Back up everything to a .zip you save wherever you like (local storage, or Google Drive through the Android file picker). Restoring merges it with what is already on the device.

DESIGN

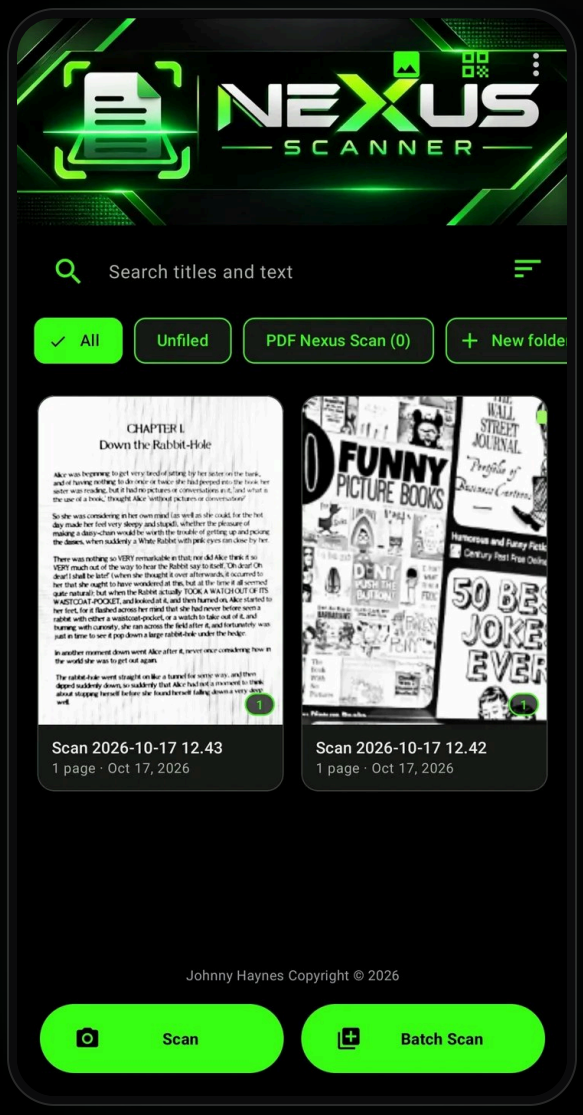

Always dark

A dark design with neon green accents that is easy on the eyes, with black backgrounds throughout.

07 · Install guide · Android APK

Install in five steps.

1 Download the APK

After Stripe confirms your payment you are sent to your download page. Open it **on your phone** and tap the download link for **NexusScanner-v1.0.4.apk**. Android may warn that this type of file can harm your device. Tap **Download anyway**.

The link works once and expires 24 hours after it is issued. If the download is interrupted, retry right away; the link allows a short retry window.

2 Allow installs from this source

Tap the downloaded file in your browser, or open **Files** and go to **Downloads**. When Android says it can't install unknown apps, tap **Settings** and turn on **Allow from this source** for your browser or Files app, then press Back.

You can also go to Settings → Apps → Special app access → Install unknown apps.

3 Install the app

Tap the **NexusScanner-v1.0.4.apk** file again, then tap **Install**.

4 If Google Play Protect blocks it

Play Protect may show a warning that the app was blocked or is unrecognized. Tap the small arrow (chevron) on the warning to expand **More details**, then tap **Install anyway** to continue.

5 Open Nexus Scanner ©

Tap **Open**, allow camera access, and start scanning. Your scans never leave your phone.

Compatible devices: Android phones with an arm64 processor. Keep your receipt, download link and APK private.

Link expired or failed? Email Johnnyhaynes12@gmail.com with your Stripe receipt and a new link will be issued.

08 · Getting started

Your first scan.

1 Allow the camera

The camera is the only permission. If you deny it permanently, the app offers **Open settings** so you can turn it back on.

2 Scan a page

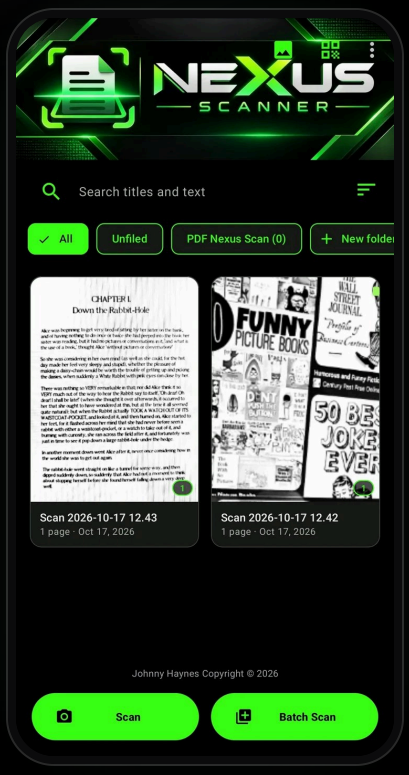

Tap **Scan** and hold the page steady. Edge detection works best when the page contrasts with its background, and you can always adjust the corners by hand.

3 Pick a filter and save

Every new scan starts with **Enhanced B&W**. Choose another chip if you like, rotate if needed, then save.

4 Export, share or sign

Open the document to export an A4 PDF (optional watermark), share it, extract text or add your signature.

Home screen with search, folders and the Scan / Batch Scan buttons.

BACK UP

Scans live only on your phone, so a lost, reset or damaged phone means lost scans. Use Menu → **Backup & restore** → **Create backup** and keep the .zip somewhere safe.

IF THE APP CLOSES

On the next launch it shows a short local crash note with **Copy**, **Share** and **Dismiss**. Nothing is sent automatically; share it with support only if you choose.

Check important documents. Text recognition and auto-crop can make mistakes, and a scanned copy may not be accepted as an original by every institution.

09 · Privacy and permissions

Built to stay private.

The app does not collect your data. It has no accounts, no servers, no ads, no analytics and no crash-reporting service, and it does not request Android's internet permission.

What the app accesses

CAMERA	The only Android permission (confirmed in the 1.0.4 APK). Used for the live preview, edge detection, capturing pages and ID cards, and reading QR codes and barcodes. Frames are processed in memory.
PHOTOS YOU PICK	The Android photo picker gives the app only the photos you select. No broad photo, media or storage permission.
FILES YOU CHOOSE	The Android file picker, only when you save a backup (.zip) or text (.txt), or open a backup to restore it.
APP STORAGE	Your scans, a local database (names, folders, page order, recognized text), your signature image, settings and any crash note.
NEVER	Location, contacts, microphone, calendar, phone number, device identifiers or the advertising ID.

On-device recognition

Text recognition and QR/barcode reading use Google's ML Kit with the models bundled inside the app. Images are processed on your device, and the ML Kit usage-statistics component is disabled.

What you choose to share

Content leaves the app only when you share, open a PDF in another app, open a scanned link, or save a backup. Backups are ordinary, unencrypted .zip files, so keep them safe.

Device backup and safety

If Android device backup is on, it may include your scans. The app adds no encryption of its own on top of Android's, so use a screen lock and device encryption.

Deleting your data

Delete pages, documents or folders in the app, or use Settings → Apps → Nexus Scanner → Storage → Clear storage, or uninstall. Exported copies must be deleted where you saved them.

Purchases: Stripe handles payment; the developer never sees your card number. Full policy: jhconsultnow.com/nexus/privacy/

10 · Support, legal and credits

The credits.

SUPPORT
Email **Johnnyhaynes12@gmail.com** with your Stripe receipt. jhconsultnow.com/nexus

REFUNDS
Within 7 days, with your receipt. Approved if the app won't install or run on a supported arm64 Android device after we've tried to help, or if you were charged in error or twice.

PRIORITY ACCESS
An optional 30-minute one-on-one call with Johnny Haynes, $35 one time, booked separately from the app.

Legal

You receive a personal, non-exclusive, non-transferable license to install and use Nexus Scanner © on your own Android devices. Do not copy, resell, redistribute or share the APK or your download link, or reverse engineer the app or remove its notices, except where the law allows. Use it only for documents you have the right to copy. The app is provided "as is"; total liability is limited to the price you paid. Nexus Scanner ©, its name, logo and artwork are the property of the seller. Full documents: Terms of Service, Merchant Policy and Privacy Policy at jhconsultnow.com/nexus/.
